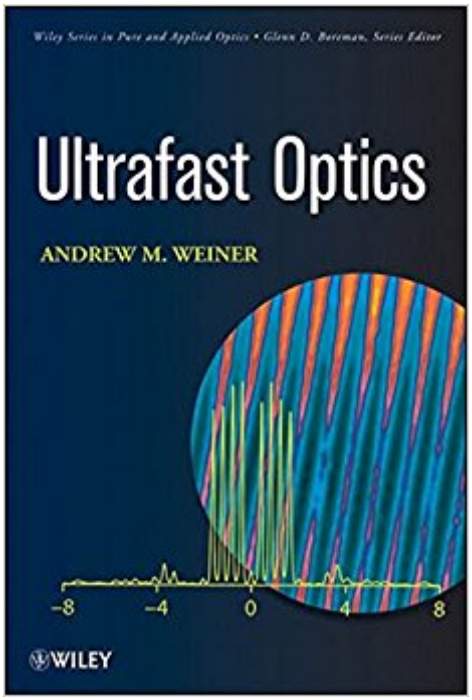
# Ultrafast Optics



## Synopsis

A comprehensive treatment of ultrafast optics This book fills the need for a thorough and detailed account of ultrafast optics. Written by one of the most preeminent researchers in the field, it sheds new light on technology that has already had a revolutionary impact on precision frequency metrology, high-speed electrical testing, biomedical imaging, and in revealing the initial steps in chemical reactions. Ultrafast Optics begins with a summary of ultrashort laser pulses and their practical applications in a range of real-world settings. Next, it reviews important background material, including an introduction to Fourier series and Fourier transforms, and goes on to cover: Principles of mode-locking  Ultrafast pulse measurement methods  Dispersion and dispersion compensation  Ultrafast nonlinear optics: second order  Ultrafast nonlinear optics: third order Mode-locking: selected advanced topics  Manipulation of ultrashort pulses  Ultrafast time-resolved spectroscopy  Terahertz time-domain electromagnetics  Professor Weiner's expertise and cutting-edge research result in a book that is destined to become a seminal text for engineers, researchers, and graduate students alike. ## Book Information

Hardcover: 598 pages

Publisher: Wiley; 1 edition (June 15, 2009)

Language: English

ISBN-10: 0471415391

ISBN-13: 978-0471415398

Product Dimensions:  7.2 x 1.5 x 10 inches

Shipping Weight: 2.6 pounds (View shipping rates and policies)

Average Customer Review:  5.0 out of 5 stars  2 customer reviews

Best Sellers Rank: #705,599 in Books (See Top 100 in Books)  #106 inÃ Â Books > Science & Math > Physics > Light  #146 inÃ Â Books > Science & Math > Physics > Waves & Wave Mechanics  #256 inÃ Â Books > Science & Math > Physics > Optics

## Customer Reviews

Ultrafast Optics Andrew M. Weiner Wiley Series in Pure and Applied Optics Glenn D. Boreman, Series Editor

A comprehensive treatment of ultrafast optics This book fills the need for a thorough and detailed account of ultrafast optics. Written by one of the most preeminent researchers in the field, it sheds

new light on technology that has already had a revolutionary impact on precision frequency metrology, high-speed electrical testing, biomedical imaging, and in revealing the initial steps in chemical reactions. Ultrafast Optics begins with a summary of ultrashort laser pulses and their practical applications in a range of real-world settings. Next, it reviews important background material, including an introduction to Fourier series and Fourier transforms, and goes on to cover: Principles of mode-locking  Ultrafast pulse measurement methods  Dispersion and dispersion compensation  Ultrafast nonlinear optics: second order  Ultrafast nonlinear optics: third order Mode-locking: selected advanced topics  Manipulation of ultrashort pulses  Ultrafast time-resolved spectroscopy  Terahertz time-domain electromagnetics  Professor Weiner's expertise and cutting-edge research result in a book that is destined to become a seminal text for engineers, researchers, and graduate students alike.

This text basically got me through the latter half of graduate school. A great reference, for any students of optics. I found it easier to follow than some of the alternative texts.

This is a really well-written book. All the topics are explained clearly, the notation is consistent, both theoretical and experimental techniques are covered in depth, and are easy to follow. Both physical intuition and mathematical insight are provided throughout the book.I found references to be most excellent and relevant, covering both historic papers on the subjects (that have been cited over 400 times), and newer techniques that have been invented recently.The book also has very helpful sections on how exactly to model certain equations numerically, and the issues with this modeling, sometimes providing step-by-step guidelines (which I was able to follow and model my processes).The author has studied (in the long past) with the most famous ultrafast optics professors, which makes him very competent and capable of writing a book of such an excellent quality.I have had this book for the last two years, and find myself using it every week.

Optics(set) Molded Optics: Design and Manufacture (Series in Optics and Optoelectronics) Ultraviolet nanoimprint lithography: Fabrication of ordered nanostructures, integrated optics and electronic devices Geometrical and Visual Optics, Second Edition Geometric, Physical, and Visual Optics, 2e Geometric, Physical, and Visual Optics Optics, Retinoscopy, and Refractometry (Basic Bookshelf for Eyecare Professionals) Geometrical and Visual Optics : A Clinical Introduction Handbook of Visual Optics, Two-Volume Set Clinical Optics and Refraction: A Guide for Optometrists, Contact Lens Opticians and Dispensing Opticians, 1e Seeing the Light: Optics in Nature, Photography, Color, Vision, and Holography Prism and Lens Making, Second Edition: A Textbook for Optical Glassworkers (Series in Optics and Optoelectronics) Modern Classical Physics: Optics, Fluids, Plasmas, Elasticity, Relativity, and Statistical Physics
