Quantum Computers

Quantum Computers

JON SCHILLER, PhD

Synopsis

I attended the Caltech Seminar Day on 16th May 2009 and heard a lecture: Quantum Information Science presented by Professor J. Preskill. His lecture had a number of slides showing how the three dimensions of Quantum states function. He mentioned Quantum Computers as the next step in computer science from the classical transistor based digital computers which have made such a change in the life of modern day humans. Since I have a deep interest in computer science based on my professional experience: designing Avionics systems for military aircraft which were the first to use digital computers, teaching Computer Science as an adjunct assistant professor to graduate students, and designing and fabricating small digital computers in a small company. I decided I needed to learn about Quantum Computers and where research is going in this important new technology. To discover the status of Quantum Computers I used the Google and Yahoo search engines. I was happy that Indiana University and Caltech have active Quantum Computer Research programs in progress.
