An Introductory Text To Bioengineering (Advanced Series In Biomechanics) (Advanced Series In Biomechanics (Paperback))

Synopsis

This bestselling textbook will introduce undergraduate bioengineering students to the fundamental concepts and techniques, with the basic theme of integrative bioengineering. It covers bioengineering of several body systems, organs, tissues, and cells, integrating physiology at these levels with engineering concepts and approaches; novel developments in tissue engineering, regenerative medicine, nanoscience and nanotechnology; state-of-the-art knowledge in systems biology and bioinformatics; and socio-economic aspects of bioengineering. One of the distinctive features of the book is that it is integrative in nature (integration of biology, medicine and engineering, across different levels of the biological hierarchy, and basic knowledge with applications). It is unique in that it covers fundamental aspects of bioengineering, cutting-edge frontiers, and practical applications, as well as perspectives of bioengineering development. Furthermore, it covers important socio-economical aspects of bioengineering such as ethics and entrepreneurship. Contents: Perspectives of Biomechanics (Y-C B Fung & W Huang); Cardiac Electromechanics in the Healthy Heart (R C P Kerckhoffs & A D McCulloch); Cardiac Biomechanics and Disease (J H Omens); Bioengineering Solution for the Treatment of Heart Failure (J T Watson & S Chien); Molecular Basis of Modulation of Vascular Functions by Mechanical Forces (S Chien); Autoregulation of Blood Flow: Examining the Process of Scientific Discovery (P C Johnson); Molecular Basis of Cell and Membrane Mechanics (L A Sung); Cell Activation in the Circulation: The Auto-Digestion Hypothesis (G W Schmid-Schönbein);
