PreSchool-Grade 2
•When Pack rat comes home with a cart full of stuff
•a locket, a book, an umbrella, a pinecone, and many more random items
•his mother admonishes him to sort it all out and put it away. Packy does just that, cleverly sorting things with like characteristics such as where they're found, their color, shape, etc. Children who like to collect may be inspired to bring some order to their own assortments. The illustrations are brightly colored, large, and very

clear. Careful readers will notice a subplot in the pictures and find satisfaction in seeing its resolution on the final page. In addition, the rhyming text prompts them to guess the word that defines each collection. Back matter has activities to extend the experience. Most collections would benefit from this simple entry into the world of mathematics. --Linda M. Went with our materials unit. perfect

A great book to introduce sorting concepts. I placed this in my math center along with manipulative to sort.

This book is great. My science classes, ranging in ages 2 to kindergarten, loved the story and now they are sorting all kinds of things.

Very expensive for a few page but helpful learning material that can help kids to learn about numbers, orders and practical life.

I find this story a little bit lame and lacking in entertainment. It does help when talking with young children about sorting though so I have used it
The delivery and service was quick and efficient though

The activities are sub par and the story itself is not very good and a little to complicated for a toddler's book. The art wasn't very engaging.

Good book. Teaches the concept and keeps the interest of a 3 1/2 year old.

Love it!
