A Video Atlas Of Neuromuscular Disorders

Synopsis

The first real cases video atlas of neuromuscular disorders that is supplemented with multiple-choice questions, and updates on the illustrated topics. It is easy to search and read. It is perfect for preparation to the neurology and neuromuscular boards and an excellent way to update the experts. By replacing the descriptive text with vivid illustrative videos, the reader will have more time to face the intellectual challenges of these cases instead of trying to build a mental picture of these cases first. Short and well-edited video clips from real clinic stories supplemented with challenging multiple choice questions, provides an excellent way to bridge the gap between overflow of information and short attention span. The chapters are arranged according the symptoms instead of diseases, yet, diseases are listed in the index if one wants to see all videos relevant to a specific disease. Close to 300 video cases* taken directly from a real neuromuscular clinic, illustrating a myriad of disorders and shedding light on their diagnosis, and treatment and giving updates about many of them provides an invaluable approach that should benefit any one who is interested in neuromuscular disorders which comprises more than 50% of presenting disease to general neurologists and even to general practitioners. Some rare diseases are also described, giving an opportunity for the new trainees to see them so that they can diagnosed them if they see them again which may not happen very often.*Due to size limitations, the videos are not included with any eBook version.

Winner of the 2015 PROSE Award in Clinical Medicine Practice, and a 2015 PROSE Award for Excellence in Biological and Life Sciences finalist. BMA Medical Book of the Year 2015 Neurology Category Award Winner. "Aziz Shaibani, one of our most astute neuromuscular clinicians, has compiled a formidable collection of videos to guide both experienced and younger physicians who encounter these disorders, from the common to the rare. In addition to the video component, cases are accompanied by clinical synopses, diagnostic pearls, figures, tables, and multiple-choice questions to challenge and expand one's knowledge base. Dr. Shaibani should be applauded for this compilation, and I expect to refer to it as both a teaching tool and a guide for my clinic sessions. I see it as a worthy companion to the indispensable website provided to the neuromuscular community by Dr. Alan Pestronk of Washington University." --Gil I. Wolfe, MD, Irvin and Rosemary Smith Professor and Chair, Department of Neurology, University at Buffalo School of Medicine and Biomedical Sciences, Buffalo, NY "The most effective way to diagnose neuromuscular diseases is by pattern recognition. Dr. Shaibani's video atlas provides a unique opportunity to 'examine' a wide variety of neuromuscular patients and to review key points leading to the correct diagnosis." --Carlayne E. Jackson, MD, FAAN, Professor of Neurology and Otolaryngology, University of Texas Health Science Center at San Antonio, Texas "A video atlas like Dr. Shaibani has produced is long overdue in the field of neuromuscular medicine. It combines all the best features of an effective teaching tool: superb videos, a question based format, excellent commentaries, and most importantly, a traditional case-based approach based on the clinical examination and findings. It is the next best thing to being at the bedside with a superb neuromuscular clinician!" --John T. Kissel, MD, Professor of Neurology & Pediatrics, The Ohio State University Wexner Medical Center, Nationwide Children's Hospital, Columbus, OH "A Video Atlas of Neuromuscular Disorders is a wonderful collection of patient videos and pathology images that identifies the salient elements of neurological clinical diagnosis. The atlas validates the statement that 'a picture is worth a thousand words' and is invaluable reference for both students learning neurology as well as seasoned clinicians considering a rare diagnosis. The Atlas represents years of Dr. Shaibani's experience treating patients with neuromuscular disease that we all can now benefit from." --Michael Polydefkis, MD, MHS, Johns Hopkins, Department of Neurology, Baltimore, MD "Dr. Aziz Shaibani's A Video Atlas of Neuromuscular Disorders presents neuromuscular medicine in a case-based approach with clinical vignettes, video clips, thought provoking questions and concise topic reviews. Each case covers many salient points, yet is easily digestible. This novel, multimodal format draws the reader from case to case, leaving one eagerly anticipating the challenge of the next patient. You will not want to stop learning until this book is done." --Matthew P. Wicklund, MD, FAAN, Professor of

Neurology and Pediatrics, Penn State College of Medicine, Department of Neurology, Hershey, PA "A first of its kind video atlas of neuromuscular disorders..." --Practical Neurology "Overall this is an excellent (and, considering the wealth of material, reasonably priced) book that emphasizes the lasting value of a diagnostic approach based on a detailed history and accurate interpretation of clinical signs also in the age of next generation genetics." --Neuromuscular Disorders

Aziz Shaibani, MD, FACP, FAAN Clinical Professor of Medicine Baylor College of Medicine Director, Nerve and Muscle Center of Texas Adjunct Professor of Neurology, KUMC Houston, TX

This book is full of facts, if you can remember most of it then NM cases in your practice will be fun to deal with. The way I learned (probably everyone does this) most out of this book was to watch the video, make your own diagnosis and then read the text and correct yourself. (we all learn from our mistakes and here no penalty for being wrong !)

Excellent videos of clinical cases well explained .

Great scientific and clinical knowledge!

Outstanding!

Great book!

Excelente!

Good for First and 2nd year neurology residents. In video atlas there are videos without any commentary (very primitive). Would not recommend for advanced residents.

Very helpful and intuitive book for Neurologists of all levels. Would definitely recommend.
