Statistical Approaches To Orofacial Pain And Temporomandibular Disorders Research (SpringerBriefs In Statistics)

Synopsis

This book covers some biostatistical methods and several case studies useful to interpret and analyze dental research in the areas of orofacial pain and temporomandibular disorders. It will guide practitioners in these fields who would like to interpret research findings or find examples on the design of clinical investigations. After an introduction dealing with the basic issues, the central sections of the textbook are dedicated to the different types of investigations in sight of specific goals researchers may have. The final section contains a recent approach based on nonparametric permutation tests which can be adopted in many practical situations. The field of orofacial pain and temporomandibular disorders is emerging as one of the most critical areas of clinical research in dentistry. Due to the complexity of clinical pictures, the multifactorial etiology, and the importance of psychosocial factors in all aspects of the TMD practice, clinicians often find it hard to appraise their *modus operandi*, and researchers must constantly increase their knowledge in epidemiology and medical statistics. Indeed, proper methodological designs are fundamental to reaching high levels of internal and external validity of findings in this specific area.

Book Information

Series: SpringerBriefs in Statistics

Paperback: 84 pages

Publisher: Springer; 2014 edition (May 30, 2014)

Language: English

ISBN-10: 1493908758

ISBN-13: 978-1493908752

Product Dimensions: 6.1 x 0.2 x 9.2 inches

Shipping Weight: 4.8 ounces (View shipping rates and policies)

Best Sellers Rank: #5,242,605 in Books (See Top 100 in Books) #94 in [Books > Medical Books > Dentistry > Craniomandibular & Temporomandibular](#) #269 in [Books > Textbooks > Medicine & Health Sciences > Medicine > Clinical > Surgery > Oral & Maxillofacial](#) #381 in [Books > Medical Books > Medicine > Surgery > Oral & Maxillofacial](#)

Customer Reviews

From the book reviews: “This is a guide to understanding statistical approaches to orofacial pain and temporomandibular disorders research. The audience is practitioners who would like to interpret research findings or find examples of the design of clinical investigations.”

this is a useful tool for those interested in developing clinical research around orofacial pain and TMJ dysfunction. (Janet H. Southerland, Doody's Book Reviews, September, 2014)

This book covers the biostatistical methods utilized to interpret and analyze dental research in the areas of orofacial pain and temporomandibular disorders. It will guide practitioners in these fields who would like to interpret research findings or find examples on the design of clinical investigations. After an introduction dealing with the basic issues, the central sections of the textbook are dedicated to the different types of investigations in sight of specific goals researchers may have. The final section contains more elaborate statistical concepts for expert professionals.

The field of orofacial pain and temporomandibular disorders is emerging as one of the most critical areas of clinical research in dentistry. Due to the complexity of clinical pictures, the multifactorial etiology, and the importance of psychosocial factors in all aspects of the TMD practice, clinicians often find it hard to appraise their *modus operandi*, and researchers must constantly increase their knowledge in epidemiology and medical statistics. Indeed, proper methodological designs are fundamental to reaching high levels of internal and external validity of findings in this specific area.
