

The Mathematics Of Angels

Synopsis

Animals are much more "mindful" than rocks. Humans are much more mindful than animals. Genius humans are much more mindful than ordinary human. There is an ascending scale of mindfulness, and humans are not the terminus ... angels are. Angels, as Saint Thomas Aquinas pointed out, are immaterial intellects, which can generate physical bodies when they need them.

though the sheer power, knowledge and understanding of their minds. If science is the language of matter, what is the language of mind? It's mathematics. The secret of existence is that, ontologically, mathematics is indistinguishable from light, and light is the basis of mind. Your mind is nothing other than a complete and consistent set of natural photons. Photons have no extension in space and time, meaning that they are outside space and time. They are in the frequency singularity of immortal things rather than the spacetime world of mortal things. Light World is Soul World, and only math is relevant to this world. Science, the subject that deals with matter, has no application to Soul World. Photons have no mass, hence are not part of material existence. Photons have no extension, no dimensions, and do not experience space and time, all of which is exactly what we require of the immortal soul. When you switch on a light, light does NOT flood into spacetime. Rather, spacetime interacts with Soul World and spacetime flows through Soul World producing the characteristic glow of light. Photons are the thoughts of the Cosmic Soul. Angels are not objects of religious faith. They are living beings, which, since they are made of pure light, are compatible with science. A mathematical formula can be provided for angels, based on the most celebrated result in analytic mathematics. Every property of angels can be mathematized. The metaphysical description of angels provided by Saint Bonaventure and Saint Thomas Aquinas is wholly convertible to a precise mathematical treatment. It's time to completely rethink your view of angels. They are not agents of religious belief but of mathematical rationalism. They are the "hidden variables" needed to explain quantum mechanics, which otherwise degenerates into the irrationalist, indeterministic, anti-causation nonsense spouted by scientific materialists and empiricists. The truth shall set you free. Math is the truth, and math is the basis of life, light, mind, soul, and angels. Angels are mental singularities outside space and time, which can enter spacetime at will as physicalized beings. There are several angels on earth right now. Do you know how to recognize them? Goethe wrote, "Everything is simpler than we can imagine, at the same time more complex and intertwined than can be comprehended." Science doesn't know the half of it. Math, however, does. Math knows the full of it. Math isn't an unreal abstraction, it's the fiber and fabric of existence, upon which everything hangs. You cannot understand reality if you fail to understand the

ontology of mathematics. Are you ready to see the light?

Customer Reviews

The subject matter itself is what drew me in to reading this book. Angels aren't given enough attention, and when you apply mathematics to angels, you get incredible results. Jack Tanner is amazingly succinct when dealing with complex mathematical topics and applying them to the concept of humans, angels, and God (thanks to Mike Hockney, author of the God Series). Highly recommend this book.
