Eyes Wide Open: Going Behind The Environmental Headlines

Paul Fleischman

Synopsis

What's really going on with the environment - in our own backyards and the wider world? Conflicting information is offered by websites, magazines, and documentaries that blur the line between news and opinion. Not every report is reliable; not every interest group is actually composed of concerned citizens. In this dynamic account, award-winning author Paul Fleischman arms teens with the basic tools to uncover vested interests and falsehoods by vetting sources, following the money, and checking references so that they can make informed decisions about what actions to take in the worldwide battle against climate change, overconsumption, and dwindling resources.

Customer Reviews

Though this book is advertised as being geared to a young audience, I found it to be an amazing resource for any age. It's chock full of links to URL's that elaborate on his points--both visually & in print.

I bought this in looking for new texts for my AP Environmental class. This book is an easy to read and is very informative. Highly recommend to anyone interested in our global environmental future and how it is being impacted by our government systems and the news organizations.

This is great book that teaches students and everybody about getting and evaluating information and information sources. It is totally crucial that we all learn these skills, especially now.

This Kindle book was completely unreadable as the print was so small. the option to enlarge the type was unavailable so you would have to zoom in 150 - 200 % which made the entire page not appear in the window. I wanted to read the book, however, so I had to get a paperback version elsewhere. Very disappointed in this go around.

This book is full of great references and information that will send you researching topics more deeply. Great resource!

Well written, informative book.

A must read for those who have years ahead and children they want to protect.

Excellent and important.
